## Description

Millinox Waste bin in stainless steel, for wall mounting. Volume 30 litres. Satin finish.

## Installation

Fix the product to the wall by using the four screws supplied with the product. Standard procedure is to use the back plate as drill template.

# Installation MXA3

## ASSEMBLY:

Included in the box:

\* Waste bin

\* Assembly equipment

Fix the product to the wall by using the four screws supplied with the product. Standard procedure is to use the back plate as drill template.

Attach the internal bag on the premounted hoops. Lift up the back hoop, and then the front hoop. Fold the bag around the hoops and twist the bag corners by the fastener between the two brackets. Push down the front hoop first and then the back hoop down to lock the twisted bag corners. The bag should be of such length that it reaches the bottom of the container.

SPARE PARTS:

Assembly equipment: YMX02

## MAINTENANCE:

Several of our products are delivered entirely or partly covered with plastic wrapping. This wrapping protects the products during transport. This wrapping must be removed before using the products.

In order for the product to retain its original quality

and appearance, regular cleaning is recommended. Use mild soap or products specifically designed for stainless steel and clean water. Then wipe the surface with a dry cloth. Never use detergents containing chlorine, iodine, fluoride or abrasives. Also avoid contact with acidic solutions and other substances incompatible with stainless steel. Remember that food stuffs and skin care products may contain such substances; e.g. ketchup, juice, salt, some cleansers, nail polish, etc. Promptly remove spills of such products.

\* Do not allow water or other liquid to dry in. This is to avoid staining the surface.

\* Even though stainless steel can withstand harsh treatment, it will easily be scratched by sharp objects. For products with polished (brushed) finishes, this will be very visible when the product is new, but after a period of use, this will be negated as the steel loses its lustre. On surfaces with satin and polished finishes, the scratches will always be visible. Never use scouring powder or steel wool on stainless steel. This will scratch the steel and steel wool will leave small particles that can develop into rust spots. \* Stainless steel must not come into contact with, or be in environments containing, chlorine solutions for long periods of time.

\* Silver polish causes stains which cannot be removed.
